

A 01 Getting Started with GitHub & Your First Repository

- Due Apr 25 by 11:59pm
- Points 100
- Submitting a file upload
- File Types docx, pdf, and pptx

Assignment: Getting Started with GitHub & Your First Repository

Objective

The goal of this assignment is to introduce you to **GitHub**, a platform widely used by data scientists, AI engineers, and developers to share and collaborate on projects. By the end of this assignment, you will:

- Create your own GitHub account
- Set up your first repository
- Upload a simple file (like a Jupyter Notebook or text file)
- Learn how GitHub will be used throughout this course

This will be the foundation for submitting and sharing your machine learning projects.

Background (Why This Matters)

GitHub is like a “cloud drive” for code, but with powerful tools that help track changes, collaborate with others, and showcase your work to future employers. Even if you’ve never coded before, getting comfortable with GitHub is an essential skill for working in AI and machine learning.

Instructions

1. Create a GitHub Account

- Go to <https://github.com>  (<https://github.com/>)
- Click **Sign Up**

- Choose a username (professional, since this may become part of your portfolio)
 - Verify your email address
-

2. Set Up Your First Repository

- After logging in, click the **+** sign in the top right → **New repository**
- Name your repository:

```
ITAI_ML_FirstRepo_YourName
```

(Replace “YourName” with your actual name)

- Select **Public** (so I can view it)
`print("Hello, Machine Learning!")`
 - Check the box **“Add a README file”**
-

3. Upload Your First File

We will practice by uploading a simple file to your repository.

Option A (Beginner-friendly: No coding required):

1. Create a text file on your computer called `hello_ml.txt`
2. Type in a sentence:

```
This is my first GitHub file for the Classic Machine Learning course.
```

3. Go to your repository on GitHub → Click **Add file** → **Upload files** → Select your file → Commit changes.

Option B (If you're ready to try Jupyter or Colab):

1. Open [Google Colab](https://colab.research.google.com/)  (<https://colab.research.google.com/>) or Jupyter Notebook if installed.
2. Create a new notebook and in the first cell type:

```
print("Hello, Machine Learning!")
```

3. Save the notebook as `hello_ml.ipynb`
 4. Upload it to your repository in the same way as above.
-

4. Submit Your Work

- Go to your repository in GitHub.
- Copy the link (URL) from your browser.

Example:

```
https://github.com/YourUsername/ITAI_ML_FirstRepo_YourName
```

- Submit this link in Canvas under this assignment.
-

Deliverable

- A GitHub repository containing at least one file (text file or notebook).
 - A submitted link to the repository.
-

Grading (10 points total)

- GitHub account created (2 pts)
 - Repository created with correct name (3 pts)
 - At least one file uploaded (3 pts)
 - Repository link submitted in Canvas (2 pts)
-

Tips

- Don't worry if this feels new—this is just practice!
 - If you have trouble, try GitHub's **Hello World Guide**: <https://docs.github.com/en/get-started/start-your-journey/hello-world>  (<https://docs.github.com/en/get-started/start-your-journey/hello-world>).
 - Ask for help in class or office hours if you get stuck.
-
